SUMMARY

4 years of experience building high-performance, scalable applications. Skilled in Java, Spring Boot, and React.js, with hands-on experience in distributed systems, caching strategies, and microservices architecture. Strong focus on secure APIs and cloud deployments.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML, CSS, SQL

Frameworks: Spring Boot, Spring Cloud, FastAPI, React.js, Redux

AI/ML & LLM: Generative AI, LLM Integration, AI Agents, Prompt Engineering, Real-Time AI Applications, Speech-to-Text, Text-to-Speech

AI/Voice Platforms: LiveKit, LLM APIs, Real-Time Audio/Video Processing

Build Tools: Maven, pip

Testing: JUnit, Mockito, Jest, React Testing Library, API Testing, Test Automation

Messaging: Apache Kafka

DevOps/Cloud: Git, GitHub, Docker, Kubernetes, Jenkins, AWS (EC2, S3, Lambda, CloudWatch), Postman

Databases: MySQL, PostgreSQL, MongoDB, Redis

Search/Observability: Elasticsearch

Security: JWT, OAuth2, Spring Security

ORM: Hibernate, JPA, SQLAlchemy

Automation: Low-Code/No-Code Test Automation, Workflow Automation

Methodologies: Agile, Scrum, JIRA

PROFESSIONAL EXPERIENCE

Software Engineer

Oct. 2022 – Present

Aveksha Technologies, Bangalore, India

- Led the migration of a legacy monolithic application into 10+ microservices using Spring Boot, REST APIs, and Kafka-based asynchronous communication, improving scalability and enabling independent deployments.
- Collaborated closely with product managers, QA, and DevOps engineers in an Agile/Scrum environment to plan, prioritize, and ship features across sprint cycles.

Project: HuLA (Human-Like Automation Platform)

Oct. 2022 – Present

Tech Stack: Java, Spring Boot, React.js, PostgreSQL, JWT, REST APIs, Docker

- Developed 30+ REST APIs for authentication, project management, automation execution, and reporting using Spring Boot.
- Built 25+ responsive React.js screens and reusable UI components for projects, applications, scenarios, test cases, workloads, and execution dashboards.
- Implemented JWT-based authentication and RBAC supporting 5 user roles across 12+ platform modules.
- Developed automation management modules supporting thousands of test cases and enterprise-scale automation workflows.

Project: Sniper (AIOps Platform)

Apr. 2023 – Present

Tech Stack: Java, Spring Boot, React.js, PostgreSQL, Redis, Elasticsearch, Kafka, Docker, Jenkins

- Developed a centralized AIOps platform that aggregates logs, metrics, and alerts from 5+ monitoring tools, improving observability and reducing Mean Time to Resolution (MTTR) for production incidents.
- Reduced REST API P95 response time from approximately 2.5 seconds to under 200 ms by eliminating N+1 query patterns, introducing Redis cache-aside caching, optimizing SQL queries, and creating appropriate database indexes.
- Designed and implemented fine-grained JWT-based Role-Based Access Control (RBAC) supporting 4+ user roles with secure, isolated authorization across all application modules.

- Integrated Elasticsearch to index application logs and operational data, enabling real-time search and faster production issue diagnosis.
- Built and deployed reusable REST APIs with search, filtering, sorting, and pagination for datasets exceeding one million records while maintaining sub-200 ms response times.
- Containerized 10+ microservices using Docker, orchestrated deployments on Kubernetes, and automated CI/CD pipelines through Jenkins, reducing deployment time by nearly 50%.

Project: DEM (Digital Experience Monitoring Platform)

Oct. 2022 – Mar. 2023

Key Focus Areas: JavaScript, React.js, Synthetic Monitoring, Webhook-based Alerting

- Developed a real-time monitoring dashboard for visualizing application performance metrics across 10+ production applications.
- Implemented synthetic monitoring workflows simulating end-user interactions across 20+ critical business transactions, surfacing failures before they impacted real users.
- Built lightweight JavaScript browser agents that collected key frontend performance metrics including page load time, API latency, and rendering performance with minimal runtime overhead.
- Integrated automated alerting through Webhooks and Slack notifications, reducing manual monitoring effort by approximately 70%.

EDUCATION

B.E. in Computer Science and Engineering

July 2018 – July 2022

Nagarjuna College of Engineering and Technology, Bangalore, India

ACHIEVEMENTS

- Best Performer at Avekshaa 2024, recognized for driving the monolith-to-microservices migration and improving system reliability
