SUMMARY

Software Engineer with 4 years of experience building scalable backend systems and secure REST APIs in both Java (Spring Boot) and Python (FastAPI), with React.js on the front end. Delivered a real-time voice AI platform on LiveKit and Deepgram, and a Spring Boot test automation platform with JWT-based authentication and role-based access control. Uses AI-native development tools (Cursor, Claude, MCP) to accelerate feature delivery while keeping codebases clean, testable, and maintainable.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML, CSS

Java Ecosystem: Spring Boot, Spring Data JPA, Spring Security, Hibernate, JPA, Maven, JUnit, Mockito

Python Ecosystem: FastAPI, SQLAlchemy, Alembic, Pydantic, asyncio, Uvicorn, Pytest

Frontend: React.js, Redux, Jest, React Testing Library

AI/ML & LLM: Generative AI, LLM Integration, AI Agents, Prompt Engineering, MCP (Model Context Protocol), Real-Time Voice AI, Speech-to-Text, Text-to-Speech, LiveKit, Deepgram, OpenRouter

AI-Native Development Tools: Cursor, Claude, OpenAI Models

APIs & Security: REST APIs, OpenAPI/Swagger, JWT, OAuth2, Role-Based Access Control

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Cloud: Git, GitHub, Docker, Kubernetes, Jenkins, AWS (EC2, S3, Lambda, CloudWatch), Caddy, Postman

Testing & Automation: API Testing, Test Automation, Low-Code/No-Code Test Automation, Workflow Automation

Methodologies: Agile, Scrum, JIRA

PROFESSIONAL EXPERIENCE

Software Engineer

Oct. 2022 – Present

Aveksha Technologies, Bangalore, India

- Collaborated closely with product managers, QA, and DevOps engineers in an Agile/Scrum environment to plan, prioritize, and ship features across 100+ sprint cycles over 4 years.

Project: Zenovia (AI Mock Interview & Candidate Screening Platform)

Jun. 2026 – Present

An AI mock interview and candidate screening platform for individuals, universities, and companies, with live voice interviews, ATS-style scoring, and automated reports.

- Developed Zenovia end-to-end using Python and FastAPI, with async endpoint design, Pydantic-based request/response validation, and SQLAlchemy/Alembic for data modeling and migrations, integrating 4 third-party services (LiveKit, Deepgram, OpenRouter, and Razorpay).
- Engineered a real-time voice interview pipeline on LiveKit with Deepgram STT/TTS for the AI interviewer, supporting 25–50 concurrent live sessions, with a fallback to LiveKit’s built-in STT/TTS if a provider key is not configured to ensure high service availability.
- Used MCP (Model Context Protocol) tools to pull LiveKit, OpenRouter, and Deepgram documentation into the development workflow, cutting integration research time by ~30%, and routed interview LLM calls through OpenRouter for question generation, response evaluation, and ATS-style report generation.
- Integrated Razorpay for payment processing and subscription management across 4+ plan tiers.

Project: HuLA (Human-Like Automation Platform)

Apr. 2025 – May 2026

A low-code/no-code test automation platform where an AI agent explores a target website and generates automated test scripts from plain-English prompts.

- Developed 20+ REST API endpoints for authentication, project management, automation execution, and reporting using Java and Spring Boot.
- Documented REST APIs with OpenAPI/Swagger and implemented centralized exception handling and request validation, standardizing error responses across 20+ endpoints.

- Created 15+ responsive React.js screens and reusable UI components for projects, applications, scenarios, test cases, workloads, and execution dashboards.
- Implemented JWT-based authentication and role-based access control (RBAC) across platform modules, covering 3 distinct user roles.
- Delivered an AI agent workflow that explores a target website and converts a plain-English test description into an executable test script, cutting down manual test-case authoring for QA users.

Project: DEM (Digital Experience Monitoring Platform)

Oct. 2022 – Mar. 2025

A digital experience monitoring platform, similar to Dynatrace, that monitors web and mobile applications, servers, CI/CD pipelines, and infrastructure, with AI-assisted root cause analysis.

- Developed a real-time monitoring dashboard covering ~50 applications and 50+ servers across web, mobile, and infrastructure, with automated alerting through Webhooks and Slack.
- Implemented synthetic monitoring workflows that simulate end-user interactions across 30+ key business transactions every 30 minutes to catch failures before they affect real users.
- Instrumented lightweight browser agents that collect 10+ frontend performance metrics such as page load time, API latency, and rendering performance.
- Added monitoring for CI/CD pipeline runs and used AI-assisted analysis to correlate logs and metrics across the stack, reducing mean-time-to-resolution (MTTR) by ~40%.

EDUCATION

B.E. in Computer Science and Engineering

Jul. 2018 – Jul. 2022

Nagarjuna College of Engineering and Technology, Bangalore, India

ACHIEVEMENTS

- Best Performer at Avekshaa 2024, recognized for strong technical contributions and reliability improvements across core platform services.
